CLASSIFIED INDEX
Volumes 5 and 6, 1974–75

Author Index

Aiken, Lewis R. Two scales of attitude toward mathematics. *5*, 67–71, Mar. 1974.

Austin, Joe Dan. An experimental study of the effects of three instructional methods in basic probability and statistics. *5*, 146–154, May 1974.

Ball, Stanley E., Newman, Frederick L., Young, Dennis L., Smith, Clarence C., & Purtle, Ronald B. Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. *5*, 105–112f, Mar. 1974.

Bassler, Otto C., Beers, Morris I., & Richardson, Lloyd I. Comparison of two instructional strategies for teaching the solution of verbal problems. *6*, 170–177, May 1975.

Bausell, R. Barker, Moody, William B., & Crouse, Richard. The effect of teaching on teacher learning. *6*, 69–76, Mar. 1975.

Beers, Morris I., Bassler, Otto C., & Richardson, Lloyd I. Comparison of two instructional strategies for teaching the solution of verbal problems. *6*, 170–177, May 1975.

Behr, Merlyn J., & Eastman, Phillip M. Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—A follow-up and refinement study. *6*, 150–157, May 1975.

Bright, George W., & Carry, L. Ray. The influence of professional reference groups on decisions of preservice secondary school mathematics teachers. *5*, 87–97, Mar. 1974.

Burton, John K., Lemke, Elmer A., & Williams, Jeral R. Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.

Callahan, Leroy G. Some general questions about Jerman's study of problem solving. *5*, 60–63, Jan. 1974.

Carpenter, Thomas P. Measurement concepts of first- and second-grade students. *6*, 3–13, Jan. 1975.

Carry, L. Ray & Bright, George W. The influence of professional reference groups on decisions of preservice secondary school mathematics teachers. *5*, 87–97, Mar. 1974.

Carry, L. Ray, & Eastman, Phillip M. Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. *6*, 142–149, May 1975.

Carry, L. Ray, & Webb, Leland F. Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. *6*, 132–140, May 1975.

Cathcart, W. George. The correlation of selected nonmathematical measures with mathematics achievement. *5*, 47–56, Jan. 1974.

Cook, Harold, Kulm, Gerald, Omari, Issa, & Lewis, Joan F. The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.

Cox, L. S. Systematic errors in the four vertical algorithms in normal and handicapped populations. *6*, 202–220, Nov. 1975.

Cromer, Fred Eugene. Structural models for predicting the difficulty of multiplication problems. *5*, 155–166, May 1974.

Crouse, Richard, Bausell, R. Barker, & Moody, William B. The effect of teaching on teacher learning. *6*, 69–76, Mar. 1975.

Dahlke, Richard M. Determining the best predictors of success and of time of completion or dropout in an individualized course in arithmetic at a community college. *5*, 213–223, Nov. 1974.

DeVault, M. Vere, Golladay, Mary A., Fox, G. Thomas, Jr., & Skuldt, Karen. Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.

Dossey, John A., & Henderson, Kenneth B. The relative effectiveness of four strategies for teaching disjunctive concepts in mathematics. *5*, 6–19, Jan. 1974.

Eastman, Phillip M. Replication studies: Why so few? *6*, 67–68, Mar. 1975.

Eastman, Phillip M., & Behr, Merlyn J. Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—A follow-up and refinement study. *6*, 150–157, May 1975.

Eastman, Phillip M., & Carry, L. Ray. Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. *6*, 142–149, May 1975.

Eisenberg, Theodore A., & McGinty, Robert L. On comparing error patterns and the effect of maturation in a unit on sentential logic. *5*, 225–237, Nov. 1974.

Fennema, Elizabeth. Mathematics learning and the sexes: A review. *5*, 126–139, May 1974.

Fox, G. Thomas, Jr., Golladay, Mary A., DeVault, M. Vere, & Skuldt, Karen. Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.

Fuson, Karen. The effects on preservice elementary teachers of learning mathematics and means of teaching mathematics through the active manipulation of materials. *6*, 51–63, Jan. 1975.

Gaslin, William L. A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. *6*, 95–108, Mar. 1975.

Geeslin, William E., & Shavelson, Richard J. Comparison of content structure and cognitive structure in high school students' learning of probability. *6*, 109–120, Mar. 1975.

Gentile, J. Ronald, & Mpiangu, Benayame Dinzau. Is conservation of number a necessary condition for mathematical understanding? *6*, 179–192, May 1975.

Golladay, Mary A., Fox, G. Thomas, Jr., DeVault, M. Vere, & Skuldt, Karen. Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.

Gregory, John W., & Osborne, Alan R. Logical reasoning ability and teacher verbal behavior within the mathematics classroom. *6*, 26–36, Jan. 1975.

Hancock, Robert R. Cognitive factors and their interaction with instructional mode. *6*, 37–50, Jan. 1975.

Harris, Margaret L., & Romberg, Thomas A. An analysis of content and task dimensions of mathematics items designed to measure level of concept attainment. *5*, 72–86, Mar. 1974.

Hater, Mary A., & Kane, Robert B. The cloze procedure as a measure of mathematical English. *6*, 121–127, Mar. 1975.

Henderson, Kenneth B., & Dossey, John A. The relative effectiveness of four strategies for teaching disjunctive concepts in mathematics. *5*, 6–19, Jan. 1974.

House, Peggy A. Learning environments, academic self-concepts, and achievement in mathematics. *6*, 244–252, Nov. 1975.

Jerman, Max E. A reply to general questions about Jerman's study. *5*, 63–64, Jan. 1974.

Johnson, Martin L. The effects of instruction on length relations on the classification, seriation, and transitivity performances of first- and second-grade children. *5*, 115–125, May 1974.

Kane, Robert B., & Hater, Mary A. The cloze procedure as a measure of mathematical English. *6*, 121–127, Mar. 1975.

Kreye, Bettibel C., & Schoen, Harold L. Five forms of written feedback to homework in a mathematics course for elementary teachers. *5*, 140–145, May 1974.

Kulm, Gerald, Omari, Issa, Lewis, Joan F., & Cook, Harold. The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.

Lemke, Elmer A., Burton, John K., & Williams, Jeral R. Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.

Lester, Frank K. Developmental aspects of children's ability to understand mathematical proof. *6*, 14–25, Jan. 1975.

Lewis, Joan F., Kulm, Gerald, Omari, Issa, & Cook, Harold. The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.
Lucas, John F. The teaching of heuristic problem-solving strategies in elementary calculus. *5*, 36–46, Jan. 1974.
McGinty, Robert L., & Eisenberg, Theodore A. On comparing error patterns and the effect of maturation in a unit on sentential logic. *5*, 225–237. Nov. 1974.
Merrill, M. David, & Wood, Norman D. An instructional strategy taxonomy: Theory and application. *6*, 195–201, Nov. 1975.
Moody, William B., Bausell, R. Barker, & Crouse, Richard. The effect of teaching on teacher learning. *6*, 69–76, Mar. 1975.
Mpiangu, Benayame Dinzau, & Gentile, J. Ronald. Is conservation of number a necessary condition for mathematical understanding? *6*, 179–192, May 1975.
Newman, Frederick L., Ball, Stanley E., Young, Dennis L., Smith, Clarence C., & Purtle, Ronald B. Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. *5*, 105–112f, Mar. 1974.
Omari, Issa, Kulm, Gerald, Lewis, Joan F., & Cook, Harold. The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.
Osborne, Alan R., & Gregory, John W. Logical reasoning ability and teacher verbal behavior within the mathematics classroom. *6*, 26–36, Jan. 1975.
Purtle, Ronald B., Newman, Frederick L., Ball, Stanley E., Young, Dennis L., & Smith, Clarence C. Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics information. *5*, 105–112f, Mar. 1974.
Richardson, Lloyd I., Bassler, Otto C., & Beers, Morris I. Comparison of two instructional strategies for teaching the solution of verbal problems. *6*, 170–177, May 1975.
Robitaille, David F. Criteria for assessing the effectiveness of teachers of secondary school mathematics. *6*, 77–87, Mar. 1975.
Romberg, Thomas A., & Harris, Margaret L. An analysis of content and task dimensions of mathematics items designed to measure level of concept attainment. *5*, 72–86, Mar. 1974.
Schoen, Harold L., & Kreye, Bettibel C. Five forms of written feedback to homework in a mathematics course for elementary teachers. *5*, 140–145, May 1974.
Schwebel, Andrew I., & Schwebel, Carol R. The relationship between performance on Piagetian tasks and impulsive responding. *5*, 98–104, Mar. 1974.
Schwebel, Carol R., & Schwebel, Andrew I. The relationship between performance on Piagetian tasks and impulsive responding. *5*, 98–104, Mar. 1974.
Shavelson, Richard J., & Geeslin, William E. Comparison of content structure and cognitive structure in high school students' learning of probability. *6*, 109–120, Mar. 1975.
Shumway, Richard J. Negative instances in mathematical concept acquisition: Transfer effects between the concepts of commutativity and associativity. *5*, 197–211, Nov. 1974.
Skuldt, Karen, Golladay, Mary A., Fox, G. Thomas, Jr., & DeVault, M. Vere. Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.
Smith, Clarence C., Newman, Frederick L., Ball, Stanley E., Young, Dennis L., & Purtle, Ronald B. Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics information. *5*, 105–112f, Mar. 1974.
Sowder, Larry. Further work on verbalization of discoveries. *6*, 222–227, Nov. 1975.
Sowder, Larry. High versus low geometry achievers in the NLSMA Y-population. *5*, 20–27, Jan. 1974.
Sowder, Larry. The influence of verbalization of discovered numerical- or sorting-task generalizations on short-term retention in connection with the Hendrix hypothesis. *5*, 167–176, May 1974.
Sowder, Larry. Is the (psychological) world flat? *5*, 57–59, Jan. 1974.
Suydam, Marilyn N., & Weaver, J. F. Research on mathematics education (K–12) reported in 1973. *5*, 238–272, Nov. 1974.
Suydam, Marilyn N., & Weaver, J. F. Research on mathematics education (K–12) reported in 1974. *6*, 253–282, Nov. 1975.
Taloumis, Thalia. The relationship of area conservation to area measurement as affected by sequence of presentation of Piagetian area tasks to boys and girls in grades one through three. *6*, 232–242, Nov. 1975.
Warkentin, Gary. The effect of mathematics instruction using manipulative models on attitude and achievement of prospective teachers. *6*, 88–94, Mar. 1975.
Weaver, J. F., & Suydam, Marilyn N. Research on mathematics education (K–12) reported in 1973. *5*, 238–272, Nov. 1974.
Weaver, J. F., & Suydam, Marilyn N. Research on mathematics education (K–12) reported in 1974. *6*, 253–282, Nov. 1975.
Webb, Leland F., & Carry, L. Ray. Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. *6*, 132–140, May 1975.
Williams, Jeral R., Burton, John K., & Lemke, Elmer A. Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.
Wittrock, M. C. A generative model of mathematics learning. *5*, 181–196, Nov. 1974.
Wood, Norman D, & Merrill, M. David. An instructional strategy taxonomy: Theory and applications. *6*, 195–201, Nov. 1975.
Young, Dennis L., Newman, Frederick L., Ball, Stanley E., Smith, Clarence C., & Purtle, Ronald B. Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. *5*, 105–112f, Mar. 1974.

Title Index

An analysis of content and task dimensions of mathematics items designed to measure level of concept attainment. Margaret L. Harris & Thomas A. Romberg. *5*, 72–86, Jan. 1974.
The cloze procedure as a measure of mathematical English. Mary A. Hater & Robert B. Kane. *6*, 121–127, Mar. 1975.
Cognitive factors and their interaction with instructional mode. Robert R. Hancock. *6*, 37–50, Jan. 1975.
A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. William L. Gaslin. *6*, 95–108, Mar. 1975.
Comparison of content structure and cognitive structure in high school students' learning of probability. William E. Geeslin & Richard J. Shavelson. *6*, 109–120, Mar. 1975.
Comparison of two instructional strategies for teaching the solution of verbal problems. Otto C. Bassler, Morris I. Beers, & Lloyd I. Richardson. *6*, 170–177, May 1975.
The correlation of selected nonmathematical measures with mathematics achievement. W. George Cathcart. *5*, 47–56, Jan. 1974.
Criteria for assessing the effectiveness of teachers of secondary school mathematics. David F. Robitaille. *6*, 77–87, Mar. 1975.
Determining the best predictors of success and of time of completion or dropout in an individualized course in arithmetic at a community college. Richard M. Dahlke. *5*, 213–223, Nov. 1974.
Developmental aspects of children's ability to understand mathematical proof. Frank K. Lester. *6*, 14–25, Jan. 1975.
The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. Gerald Kulm, Issa Omari, Joan F. Lewis, & Harold Cook. *5*, 28–35, Jan. 1974.
The effect of mathematics instruction using manipulative models on attitude and achievement of prospective teachers. Gary Warkentin. *6*, 88–94, Mar. 1975.

The effect of teaching on teacher learning. R. Barker Bausell, William B. Moody, & Richard Crouse. 6, 69–76, Mar. 1975.
The effects of instruction on length relations on the classification, seriation, and transitivity performances of first- and second-grade children. Martin L. Johnson. 5, 115–125, May 1974.
The effects on preservice elementary teachers of learning mathematics and means of teaching mathematics through the active manipulation of materials. Karen Fuson. 6, 51–63, Jan. 1975.
An experimental study of the effects of three instructional methods in basic probability and statistics. Joe Dan Austin. 5, 146–154, May 1974.
Five forms of written feedback to homework in a mathematics course for elementary teachers. Harold L. Schoen & Bettibel C. Kreye. 5, 140–145, May 1974.
Further work on verbalization of discoveries. Larry Sowder. 6, 222–227, Nov. 1975.
A generative model of mathematics learning. M. C. Wittrock. 5, 181–196, Nov. 1974.
High versus low geometry achievers in the NLSMA Y-population. Larry Sowder. 5, 20–27, Jan. 1974.
The influence of professional reference groups on decisions of preservice secondary school mathematics teachers. George W. Bright & L. Ray Carry. 5, 87–97, Mar. 1974.
The influence of verbalization of discovered numerical- or sorting-task generalizations on short-term retention in connection with the Hendrix hypothesis. Larry Sowder. 5, 167–176, May 1974.
Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. Frederick L. Newman, Stanley E. Ball, Dennis L. Young, Clarence C. Smith, & Ronald B. Purtle. 5, 105–112f, Mar. 1974.
An instructional strategy taxonomy: Theory and applications. M. David Merrill & Norman D. Wood. 6, 195–201, Nov. 1975.
Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—a follow-up and refinement study. Merlyn J. Behr & Phillip M. Eastman. 6, 150–157, May 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. Leland F. Webb & L. Ray Carry. 6, 132–140, May 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. Phillip M. Eastman & L. Ray Carry. 6: 142–149, May 1975.
Is conservation of number a necessary condition for mathematical understanding? Benayame Dinzau Mpiangu & J. Ronald Gentile. 6, 179–192, May 1975.
Is the (psychological) world flat? Larry Sowder. 5, 57–59, Jan. 1974.
Learning environments, academic self-concepts, and achievement in mathematics. Peggy A. House. 6, 244–252, Nov. 1975.
Logical reasoning ability and teacher verbal behavior within the mathematics classroom. John W. Gregory & Alan R. Osborne. 6, 26–36, Jan. 1975.
Mathematics learning and the sexes: A review. Elizabeth Fennema. 5, 126–139, May 1974.
Measurement concepts of first- and second-grade students. Thomas P. Carpenter. 6, 3–13, Jan. 1975.
Negative instances in mathematical concept acquisition: Transfer effects between the concepts of commutativity and associativity. Richard J. Shumway. 5, 197-211, Nov. 1974.
On comparing error patterns and the effect of maturation in a unit on sentential logic. Theodore A. Eisenberg & Robert L. McGinty. 5, 225–237, Nov. 1974.
Problems in empirical research on individualized mathematics programs. Mary A. Golladay, G. Thomas Fox, Jr., M. Vere DeVault, & Karen Skuldt. 6, 159–169, May 1975.
Research on mathematics education (K–12) reported in 1974. Marilyn N. Suydam & J. F. Weaver. 6, 253–282, Nov. 1975.
The relationship between performance on Piagetian tasks and impulsive responding. Andrew I. Schwebel & Carol R. Schwebel. 5, 98–104, Mar. 1974.
The relationship of area conservation to area measurement as affected by sequence of presentation of Piagetian area tasks to boys and girls in grades one through three. Thalia Taloumis. 6, 232–242, Nov. 1975.
The relative effectiveness of four strategies for teaching disjunctive concepts in mathematics. John A. Dossey & Kenneth B. Henderson. 5, 6–19, Jan. 1974.
Replication studies: Why so few? Phillip M. Eastman. 6, 67–68, Mar. 1975.
A reply to general questions about Jerman's study. Max E. Jerman. 5, 63–64, Jan. 1974.
Research on mathematics education (K–12) reported in 1973. Marilyn N. Suydam & J. F. Weaver. 5, 238–272, Nov. 1974.
Some general questions about Jerman's study of problem solving. Leroy G. Callahan. 5, 60–63, Jan. 1974.
Structural models for predicting the difficulty of multiplication problems. Fred Eugene Cromer. 5, 155–166, May 1974.
Systematic errors in the four vertical algorithms in normal and handicapped populations. L. S. Cox. 6, 202–220, Nov. 1975.
The teaching of heuristic problem-solving strategies in elementary calculus. John F. Lucas. 5, 36–46, Jan. 1974.
Transfer effects as a function of variety of method and ability level in elementary mathematics. John K. Burton, Elmer A. Lemke, & Jeral R. Williams. 6, 228–231, Nov. 1975.
Two scales of attitude toward mathematics. Lewis R. Aiken. 5, 67–71, Mar. 1974.

Subject Index

ACHIEVEMENT

Cognitive factors and their interaction with instructional mode. 6, 37–50, Jan. 1975.
A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. 6, 95–108, Mar. 1975.
The correlation of selected nonmathematical measures with mathematics achievement. 5, 47–56, Jan. 1974.
Determining the best predictors of success and of time of completion or dropout in an individualized course in arithmetic at a community college. 5, 213–223, Nov. 1974.
The effect of mathematics instruction using manipulative models on attitude and achievement of prospective teachers. 6, 88–94, Mar. 1975.
High versus low geometry achievers in the NLSMA Y-population. 5, 20–27, Jan. 1974.
Learning environments, academic self-concepts, and achievement in mathematics. 6, 244–252, Nov. 1975.
Mathematics learning and the sexes: A review. 5, 126–139, May 1974.

ALGEBRA

Comparison of two instructional strategies for teaching the solution of verbal problems. 6, 170–177, May 1975.
The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. 5, 28–35, Jan. 1974.

APTITUDE AND ABILITY

Cognitive factors and their interaction with instructional mode. 6, 37–50, Jan. 1975.
The correlation of selected nonmathematical measures with mathematics achievement. 5, 47–56, Jan. 1974.

Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. *6*, 132–140, May 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. *6*, 142–149, May 1975.
Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—a follow-up and refinement study. *6*, 150–157, May 1975.

ATTITUDE

A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. *6*, 95–108, Mar. 1975.
The effect of mathematics instruction using manipulative models on attitude and achievement of prospective teachers. *6*, 88–94, Mar. 1975.
The effects on preservice elementary teachers of learning mathematics and means of teaching mathematics through the active manipulation of materials. *6*, 51–63, Jan. 1975.
The influence of professional reference groups on decisions of preservice secondary school mathematics teachers. *5*, 87–97, Mar. 1974.
Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. *5*, 105–112f, Mar. 1974.
Learning environments, academic self-concepts, and achievement in mathematics. *6*, 244–252, Nov. 1975.
Two scales of attitude toward mathematics. *5*, 67–71, Mar. 1974.

CALCULATORS

A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. *6*, 95–108, Mar. 1975.

COLLEGE MATHEMATICS

Determining the best predictors of success and of time of completion or dropout in an individualized course in arithmetic at a community college. *5*, 213–223, Nov. 1974.
An experimental study of the effects of three instructional methods in basic probability and statistics. *5*, 146–154, May 1974.
Five forms of written feedback to homework in a mathematics course for elementary teachers. *5*, 140–145, May 1974.
Further work on verbalization of discoveries. *6*, 222–227, Nov. 1975.
Initial attitude differences among successful, procrastinating, and "withdrawn-from-course" students in a personalized system of statistics instruction. *5*, 105–112f, Mar. 1974.
The influence of verbalization of discovered numerical- and sorting-task generalizations on short-term retention in connection with the Hendrix hypothesis. *5*, 167–176, May 1974.
The teaching of heuristic problem-solving strategies in elementary calculus. *5*, 36–46, Jan. 1974.
Two scales of attitude toward mathematics. *5*, 67–71, Mar. 1974.

COMPUTATIONAL ALGORITHMS

A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. *6*, 95–108, Mar. 1975.
Systematic errors in the four vertical algorithms in normal and handicapped populations. *6*, 202–220, Nov. 1975.

CONCEPT FORMATION

An analysis of content and task dimensions of mathematics items designed to measure level of concept attainment. *5*, 72–86, Mar. 1974.
Negative instances in mathematical concept acquisition: Transfer effects between the concepts of commutativity and associativity. *5*, 197–211, Nov. 1974.
The relative effectiveness of four strategies for teaching disjunctive concepts in mathematics. *5*, 6–19, Jan. 1974.

CONSERVATION (CONCEPT)

Is conservation of number a necessary condition for mathematical understanding? *6*, 179–192, May 1975.
Measurement concepts of first- and second-grade students. *6*, 3–13, Jan. 1975.
The relationship between performance on Piagetian tasks and impulsive responding. *5*, 98–104, Mar. 1974.
The relationship of area conservation to area measurement as affected by sequence of presentation of Piagetian area tasks to boys and girls in grades one through three. *6*, 232–242, Nov. 1975.

DATA ANALYSIS

Is the (psychological) world flat? *5*, 57–59, Jan. 1974.
Replication studies: Why so few? *6*, 67–68, Mar. 1975.

ELEMENTARY SCHOOL MATHEMATICS

An analysis of content and task dimensions of mathematics items designed to measure level of concept attainment. *5*, 72–86, Mar. 1974.
The correlation of selected nonmathematical measures with mathematics achievement. *5*, 47–56, Jan. 1974.
Research on mathematics education (K–12) reported in 1973. *5*, 238–272, Nov. 1974.
Research on mathematics education (K–12) reported in 1974. *6*, 253–282, Nov. 1975.
Structural models for predicting the difficulty of multiplication problems. *5*, 155–166, May 1974.
Systematic errors in the four vertical algorithms in normal and handicapped populations. *6*, 202–220, Nov. 1975.
Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.

ERROR PATTERNS

On comparing error patterns and the effect of maturing in a unit on sentential logic. *5*, 225–237, Nov. 1974.
Systematic errors in the four vertical algorithms in normal and handicapped populations. *6*, 202–220, Nov. 1975.

EVALUATION

Criteria for assessing the effectiveness of teachers of secondary school mathematics. *6*, 77–87, Mar. 1975.

FRACTIONS

A comparison of achievement and attitudes of students using conventional or calculator-based algorithms for operations on positive rational numbers in ninth-grade general mathematics. *6*, 95–108, Mar. 1975.
Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.

GEOMETRY

High versus low geometry achievers in the NLSMA Y-population. *5*, 20–27, Jan. 1974.
The relationship of area conservation to area measurement as affected by sequence of presentation of Piagetian area tasks to boys and girls in grades one through three. *6*, 232–242, Nov. 1975.

HOMEWORK

Five forms of written feedback to homework in a mathematics course for elementary teachers. *5*, 140–145, May 1974.

INDIVIDUAL DIFFERENCES

Determining the best predictors of success and of time of completion or dropout in an individualized course in arithmetic at a community college. *5*, 213–223, Nov. 1974.
Mathematics learning and the sexes: A review. *5*, 126–139, May 1974.
Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.

INSTRUCTION

Cognitive factors and their interaction with instructional mode. *6*, 37–50, Jan. 1975.
Comparison of two instructional strategies for teaching the solution of verbal problems. *6*, 170–177, May 1975.
Criteria for assessing the effectiveness of teachers of secondary school mathematics. *6*, 77–87, Mar. 1975.
The effect of teaching on teacher learning. *6*, 69–76, Mar. 1975.
The effects of instruction on length relations on the classification, seriation, and transitivity performances of first- and second-grade children. *5*, 115–125, May 1974.
An experimental study of the effects of three instructional methods in basic probability and statistics. *5*, 146–154, May 1974.
A generative model of mathematics learning. *5*, 181–196, Nov. 1974.
An instructional strategy taxonomy: Theory and applications. *6*, 195–201, Nov. 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. *6*, 132–140, May 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. *6*, 142–149, May 1975.
Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—a follow-up and refinement study. *6*, 150–157, May 1975.
Logical reasoning ability and teacher verbal behavior within the mathematics classroom. *6*, 26–36, Jan. 1975.
Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.
The teaching of heuristic problem-solving strategies in elementary calculus. *5*, 36–46, Jan. 1974.
Transfer effects as a function of variety of method and ability level in elementary mathematics. *6*, 228–231, Nov. 1975.

INSTRUCTIONAL MATERIALS

The cloze procedure as a measure of mathematical English. *6*, 121–127, Mar. 1975.
Comparison of content structure and cognitive structure in high school students' learning of probability. *6*, 109–120, Mar. 1975.
The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.
An instructional strategy taxonomy: Theory and applications. *6*,195–201, Nov. 1975.
The relative effectiveness of four strategies for teaching disjunctive concepts in mathematics. *5*, 6–19, Jan. 1974.

INTERACTION

Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A follow-up study. *6*, 132–140, May 1975.
Interaction of spatial visualization and general reasoning abilities with instructional treatment in quadratic inequalities: A further investigation. *6*, 142–149, May 1975.
Interactions between structure-of-intellect factors and two methods of presenting concepts of modulus seven arithmetic—a follow-up and refinement study. *6*, 150–157, May 1975.

LEARNING

Comparison of content structure and cognitive structure in high school students' learning of probability. *6*, 109–120, Mar. 1975.
The effect of teaching on teacher learning. *6*, 69–76, Mar. 1975.
Further work on verbalization of discoveries. *6*, 222–227, Nov. 1975.
A generative model of mathematics learning. *5*, 181–196, Nov. 1974.
The influence of verbalization of discovered numerical- or sorting-task generalizations on short-term retention in connection with the Hendrix hypothesis. *5*, 167–176, May 1974.
Negative instances in mathematical concept acquisition: Transfer effects between the concepts of commutativity and associativity. *5*, 197–211, Nov. 1974.

LOGIC

On comparing error patterns and the effect of maturation in a unit on sentential logic. *5*, 225–237, Nov. 1974.
Developmental aspects of children's ability to understand mathematical proof. *6*, 14–25, Jan. 1975.
Logical reasoning ability and teacher verbal behavior within the mathematics classroom. *6*, 26–36, Jan. 1975.
The relative effectiveness of four Strategies for teaching disjunctive concepts in mathematics. *5*, 6–19, Jan. 1974.

MANIPULATIVE MATERIALS

The effect of mathematics instruction using manipulative models on attitude and achievement of prospective teachers. *6*, 88–94, Mar. 1975.
The effects of preservice elementary teachers of learning mathematics and means of teaching mathematics through the active manipulation of materials. *6*, 51–63, Jan. 1975.
An experimental study of the effects of three instructional methods in basic probability and statistics. *5*, 146–154, May 1974.

MEASUREMENT

The effects of instruction on length relations on the classification, seriation, and transitivity performances of first- and second-grade children. *5*, 115–125, May 1974.
Measurement concepts of first- and second-grade students. *6*, 3–13, Jan. 1975.

MODELS (RESEARCH)

A generative model of mathematics learning. *5*, 181–196, Nov. 1974.
An instructional strategy taxonomy: Theory and applications. *6*, 195–201, Nov. 1975.
Problems in empirical research on individualized mathematics programs. *6*, 159–169, May 1975.
Structural models for predicting the difficulty of multiplication problems. *5*, 155–166, May 1974.

MULTIPLICATION

Structural models for predicting the difficulty of multiplication problems. *5*, 155–166, May 1974.

NUMBER CONCEPTS AND SYSTEMS

Is conservation of number a necessary condition for mathematical understanding? *6*, 179–192, May 1975.

PIAGETIAN RESEARCH

The relationship between performance on Piagetian tasks and impulsive responding. *5*, 98–104, Mar. 1974.
The relationship of area conservation to area measurement as affected by sequence of presentation of Piagetian area tasks to boys and girls in grades one through three. *6*, 232–242, Nov. 1975.
The effects of instruction on length relations on the classification, seriation, and transitivity performances of first- and second-grade children. *5*, 115–125, May 1974.
Is conservation of number a necessary condition for mathematical understanding? *6*, 179–192, May 1975.
Measurement concepts of first- and second-grade students. *6*, 3–13, Jan. 1975.

PROBLEM SOLVING

Comparison of two instructional strategies for teaching the solution of verbal problems. *6*, 170–177, May 1975.
Developmental aspects of children's ability to understand mathematical proof. *6*, 14–25, Jan. 1975.
The effectiveness of textbook, student-generated, and pictorial versions of presenting mathematical problems in ninth-grade algebra. *5*, 28–35, Jan. 1974.
A reply to general questions about Jerman's study. *5*, 63–64, Jan. 1974.
Some general questions about Jerman's study of problem solving. *5*, 60–63, Jan. 1974.
The teaching of heuristic problem-solving strategies in elementary calculus. *5*, 36–46, Jan. 1974.

PROOF

Developmental aspects of children's ability to understand mathematical proof. *6*, 14–25, Jan. 1975.

READING

The cloze procedure as a measure of mathematical English. *6*, 121–127, Mar. 1975.

RESEARCH METHODOLOGY

Is the (psychological) world flat? *5*, 57–59, Jan. 1974.
Replication studies: Why so few? *6*, 67–68, Mar. 1975.
A reply to general questions about Jerman's study. *5*, 63–64, Jan. 1974.
Some general questions about Jerman's study of problem solving. *5*, 60–63, Jan. 1974.

RESEARCH REVIEWS

Mathematics learning and the sexes: A review. *5*, 126–139, May 1974.
Research on mathematics education (K–12) reported in 1973. *5*, 238–272, Nov. 1974.
Research on mathematics education (K–12) reported in 1974. *6*, 253–282, Nov. 1975.
